

AI for Bharat Hackathon

Powered by **aws**

Team Name : Edgecraft

Team Leader Name : Chirag Punia

Problem Statement : Build an AI-powered Solution that enhances decision-making, efficiency, or user experience across retail, commerce, and marketplace ecosystems.

Brief about the Idea: Retail Analytics Reimagined

We **unify** seller data from **Amazon, Flipkart, Shopify, Facebook Marketplaces** into one intelligent platform.

- Sellers get one clear view of their business , sales, inventory, shipments, and pricing all in one place 📊.
- Now instead of guesswork they can **act on insights**

On top of this, we deliver:

- A unified performance dashboard
- AI that speaks your business in your language
- Customer feedback insights
- Smart pricing guidance
- Demand forecasting to prevent stockouts

*We transforms **retail data analytics** by combining intuitive dashboards with **AI-powered chatbots**, giving you the answers you need ;fast, clear, and personalized.*

Why Our Solution Stands Out

The Problem Today

- Traditional e-commerce analytics tools leave you **drowning** in data with **little actionable insight**.
- E-commerce businesses **struggle** to make sense of raw data and **outdated dashboards**.

How we are Different

- We combine advanced AI and **conversational intelligence** to help you make smarter **decisions faster**.
- AI is not an add-on, it is **essential**.

The Solution

We eliminate scattered data and guesswork by delivering:

- AI-powered analytics transform these challenges into **seamless insights**, empowering you to stay ahead of the **competition**.

Our Secret Sauce (USP) - One unified business view with the **power of AI-**

driven insights for Bharat & Designed for MSMEs.

List of features offered by the solution

AI assistant

- “Why did sales drop? “
- “What will stockout next week?”
- “Summarize complaints in Marathi”

Pricing intelligence

- Price tracking & margin impact
- Suggestions: price band, promo triggers, buy-box/competitor signals (where available)

Data + Ops

- Unified orders, shipments, cancellation/return tracking
- Inventory health: FBA + non-FBA, low stock, aging inventory

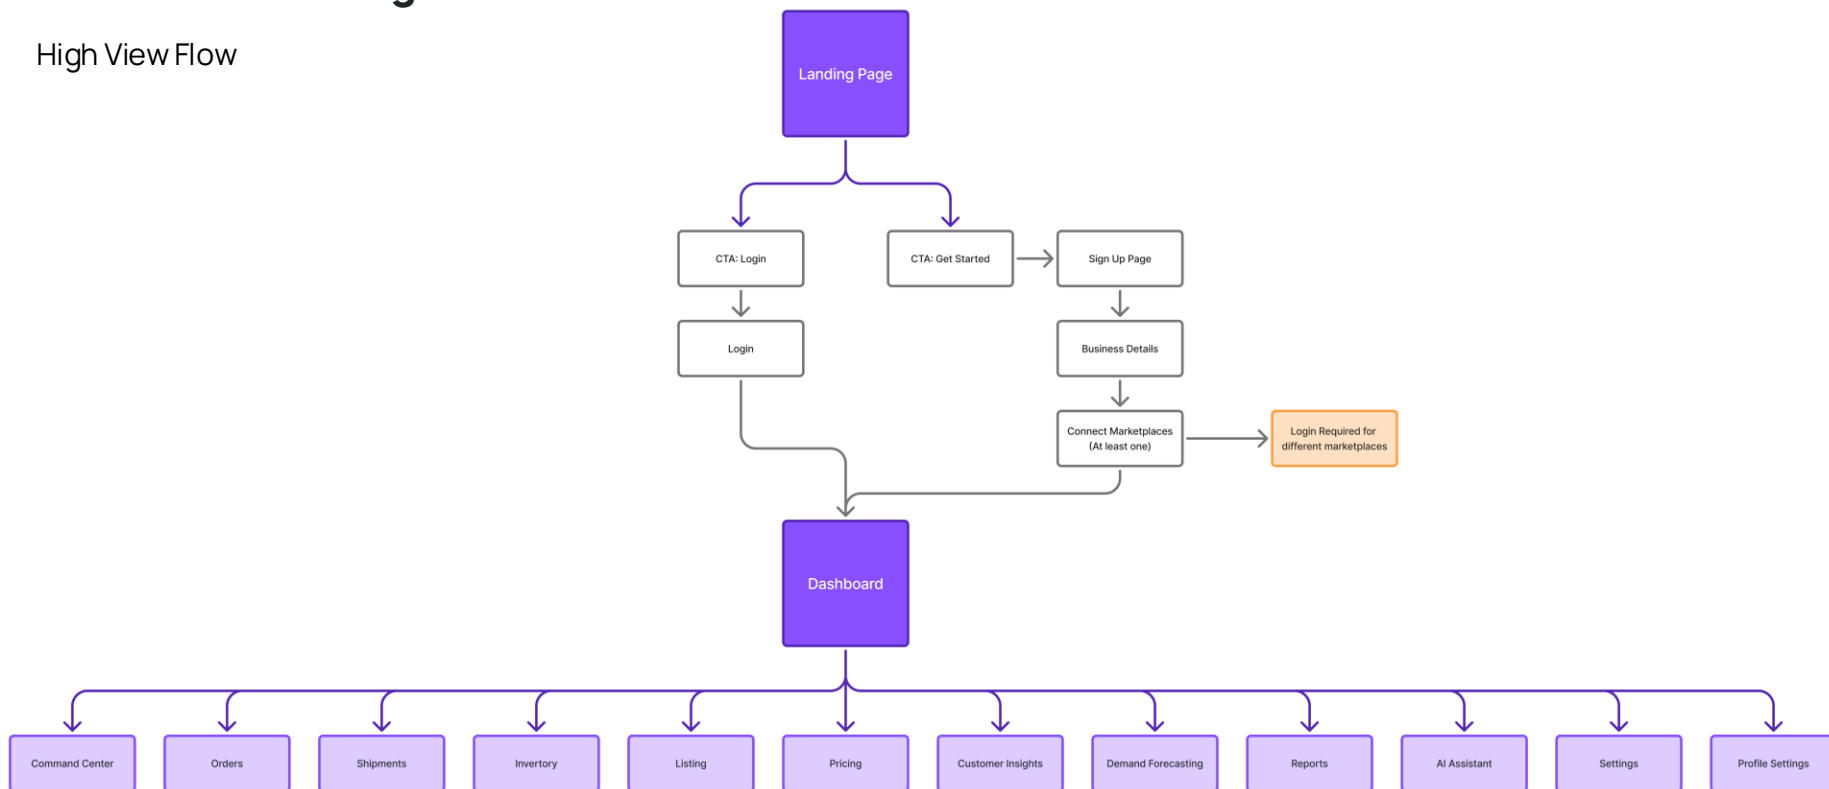

Insights

- Customer feedback mining (topics, sentiment, trend alerts)
- Product-fit insights (why ratings drop, why returns happen)

Process flow diagram

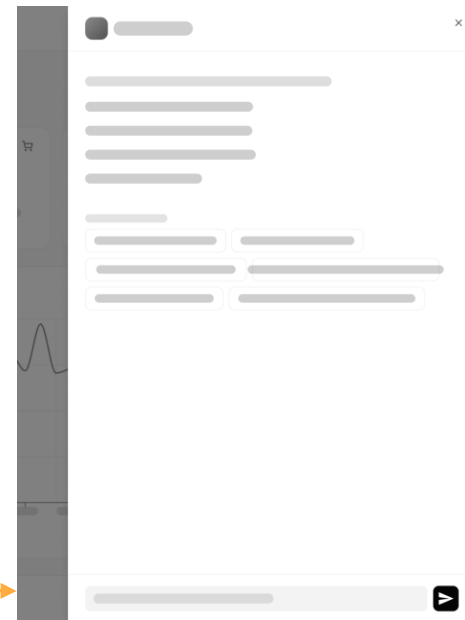

High View Flow

Wireframes/Mock diagrams of the proposed solution

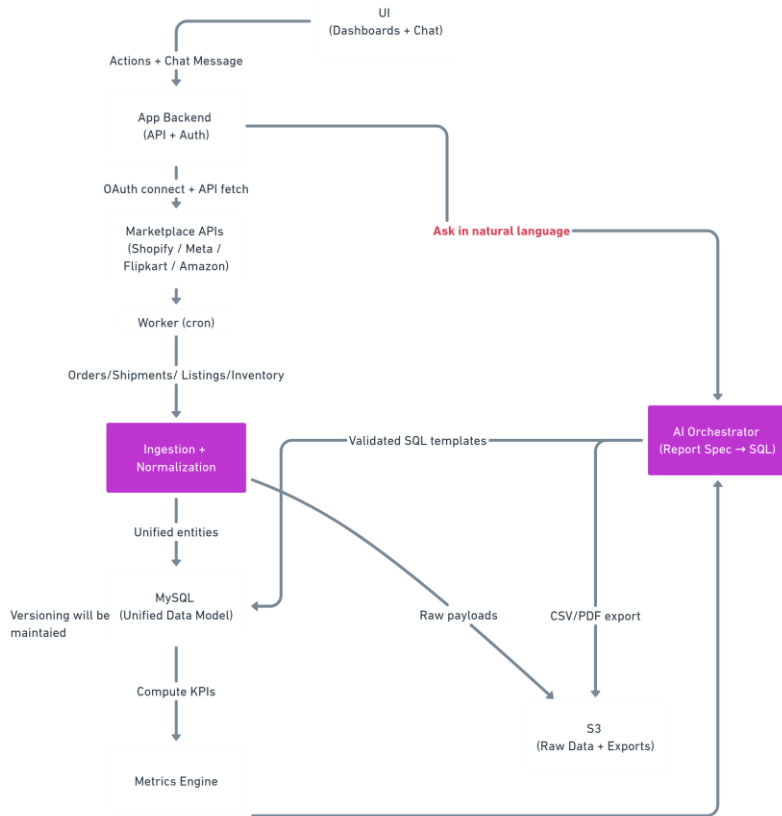

Dashboard with KPIs

AI Companion

Architecture diagram of the proposed solution:

- Connect marketplaces → fetch data daily
- Convert into one common format
- Store unified data + keep raw backup
- KPIs computed automatically
- **Ask in natural language** → safe report generated
- **Download reports (CSV/PDF)** + track trends over time

Technologies to be used in the solution:

Area	Tech Used	Purpose
Frontend	React.js	Dashboards + Chat UI
Backend	Python (FastAPI)	APIs, business logic, report generation
App Login	Auth0	Secure access + user roles
Marketplace Connect	OAuth (Shopify/Meta/Flipkart/Amazon)	Connect seller accounts + permissions
Data Sync + Processing	Worker/Cron + Normalization code	Fetch APIs → convert to unified entities
Database	MySQL	Store unified data + daily insights/rollups
Storage	S3	Raw payload backup + CSV/PDF exports
Conversational AI	LLM + Report Spec (JSON) + SQL templates	Natural language → safe report queries + answers

Estimated implementation cost:

Cost Head (Monthly)	What you run in MVP	Target Cost (₹/month)
Compute	1 small server for API + sync worker + metrics jobs	₹2,500 – ₹4,000
Database	Small SQL DB	₹1,500 – ₹3,000
Storage	Raw dumps + exports (limited retention) (backup)	₹200 – ₹800
AI Usage	Only “Report Spec” (filter that AI will return to run on db) generation + short summaries	₹1,000 – ₹2,500

Total Cost for **MVP** : **₹5,200 – ₹10,300 / month**

Added as per the requirements for the hackathon:

- We have used Kori AI for generating "Design.md" & "Requirements.md".
- A GitHub link is generated with all the markdown files and the conceptual visual screens.
